Chapter 1

Prerequisites

The primary goal of this course is to explore various manifestations of strategic behavior, including how to conceptualize, theorize, and analyze strategic relationships. Emphasis will be placed on thinking through precise relationships between theories of behavior and empirical estimation of those theories, including all of the explicit and implicit assumptions associated with model building and theory testing. Through this course we will: + Develop a basic understanding of game theory and strategic behavior. + Think about and implement the steps necessary to design well-crafted empirical models. + Learn the skills necessary to accurately model and empirically estimate strategic relationships. + Demonstrate capacity to engage in high-quality empirical research.

Thus, we aim to understand the strategic behaviors in better way. All political actor behaves strategically. EITM, empirical implication of theoretical models, provides different way to think about our research. + What does EITM mean? + Narrow: Formal models + Empirical tests + Broad: Regardless of formal models, think about how to understand our research in terms of strategic actions. + To read and to evaluate: What is author arguing and do they test accurately?

Chapter 2

Introduction

You can label chapter and section titles using `{#label}` after them, e.g., we can reference Chapter 2. If you do not manually label them, there will be automatic labels anyway, e.g., Chapter 4.

Figures and tables with captions will be placed in `figure` and `table` environments, respectively.

```
par(mar = c(4, 4, .1, .1))
plot(pressure, type = 'b', pch = 19)
```

Reference a figure by its code chunk label with the `fig:` prefix, e.g., see Figure 2.1. Similarly, you can reference tables generated from `knitr::kable()`, e.g., see Table 2.1.

```
knitr::kable(
  head(iris, 20), caption = 'Here is a nice table!',
  booktabs = TRUE
)
```

You can write citations, too. For example, we are using the `bookdown` package (Xie, 2019) in this sample book, which was built on top of R Markdown and `knitr` (Xie, 2015).

Figure 2.1: Here is a nice figure!

Table 2.1: Here is a nice table!				
Sepal.Length	Sepal.Width	Petal.Length	Petal.Width	Species
5.1	3.5	1.4	0.2	setosa
4.9	3.0	1.4	0.2	setosa
4.7	3.2	1.3	0.2	setosa
4.6	3.1	1.5	0.2	setosa
5.0	3.6	1.4	0.2	setosa
5.4	3.9	1.7	0.4	setosa
4.6	3.4	1.4	0.3	setosa
5.0	3.4	1.5	0.2	setosa
4.4	2.9	1.4	0.2	setosa
4.9	3.1	1.5	0.1	setosa
5.4	3.7	1.5	0.2	setosa
4.8	3.4	1.6	0.2	setosa
4.8	3.0	1.4	0.1	setosa
4.3	3.0	1.1	0.1	setosa
5.8	4.0	1.2	0.2	setosa
5.7	4.4	1.5	0.4	setosa
5.4	3.9	1.3	0.4	setosa
5.1	3.5	1.4	0.3	setosa
5.7	3.8	1.7	0.3	setosa
5.1	3.8	1.5	0.3	setosa

Chapter 3

Literature

Here is a review of existing methods.

Chapter 4

Methods

We describe our methods in this chapter.

Chapter 5

Applications

Some significant applications are demonstrated in this chapter.

5.1 Example one

5.2 Example two

Chapter 6

Final Words

We have finished a nice book.
